

WASTE WATER TREATMENT PLANT FOR SLAUGHTERHOUSES: PHYSICO-CHEMICAL EQUIPMENT (DISSOLVED AIR FLOTATION) ASSEMBLED IN A CONTAINER

**Waste water to be treated:**

Treatment of waste water from activities performed in slaughterhouses.

Flow: from 5 to 30 m³/ hour

Plant characteristics:

Waste water treatment plant equipped with pre-treatment, chemical and physical equipment (Dissolved Air Flotation) to treat waste water with high fat content and organic load. It is adjustable so you can add other complementary treatments if necessary.

Advantage:

- High chemical and mechanical resistance.
- High resistance to corrosion.
- Compact
- Plant designed to accommodate peak flows.
- Simple to operate and maintain.
- With excess sludge extraction.
- Low power consumption as not all equipment operates at the same time.
